Consumers’ Representations of Social Media
Jonathan Deschenes, HEC Montreal, Canada
Lana Jurdak, HEC Montreal, Canada
Sylvain Senecal, HEC Montreal, Canada

Existing literature exposes isolated pieces of information related to social media such as usage motivations and purchasing processes. A thorough understanding of how consumers experience the social media is missing. A ZMET analysis is performed with consumers in order to understand what social media represents to them.

EXTENDED ABSTRACT

Over the last few years, social media has been studied by academics under different perspectives. They include topics such as the different degrees of usage of social networks (Hargittai and Hsieh, 2011), the relationship between personality traits and social media use (Özgüven and Mucan, 2013), the purchasing processes involving social media for specific activities such as travelling (Xiang and Gretzel, 2010), and social media engagement and its effect on online product purchase decision behaviors (Dhar and Jha, 2014). These studies contribute to our understanding of how consumers behave on or use social media but they generally overlook how consumers make sense of this universe.

In a general sense, some scholars have looked at the experience of the Internet and suggested that it can be used by consumers to extend one’s identity and sense of self (Belk, 2013), present one’s self to others (Schau and Gilly, 2003; Schlosser, 2005) and that it can be a source of freedom, information, empowerment or enslavement, fear and chaos (Joy, Sherry, Venkatesh and Deschenes, 2009). However, to our knowledge, no academic research has studied how consumers experience the specificity of social media space. As individuals’ perceptions have not been studied by a thorough exploration, we still cannot fully comprehend how consumers understand these media that they navigate on a regular basis. Consequently, the goal of this paper is to provide a detailed account of what social media represents to consumers. It provides a fundamental exploration of social media, of how it is perceived by consumers, and of what it involves in their lives.

In order to do so, we explore the metaphors evoked by consumers to express their perceptions of social media. Metaphors shape the way individuals think and act (Lakoff and Johnson, 2003). Researchers use metaphors to analyze consumers’ dialogue as they convey meaning easily (Joy, Sherry, Venkatesh and Deschenes, 2009). For complex concepts in research, the process of eliciting metaphors is useful because it serves to represent a topic in its totality (Moser, 2000). Further, it helps to organize the data in a structural manner, give a new and creative perspective of analysis, and facilitates the emergence of deep feelings and emotions (Carpenter, 2008).

Method

The ZMET method was used in this research, a technique by which researchers elicit metaphors with the use of imagery to analyze consumers’ discourse (Zaltman, 1997). Images allow unconscious feelings and emotions about a topic to emerge (Zaltman, 1997). Ten in-depth ZMET interviews lasting approximately two hours were conducted with consumers of social media.

Findings and Discussion

Findings highlight that consumers’ representations of social media are complex and multi-faceted. Primarily, we observed that three deep metaphors (Zaltman and Zaltman, 2008) are central to consumers’ perceptions: the metaphors of connection (the important need to connect with others physically, socially, or mentally, to belong and form attachments), control (the unconscious motivation to control themselves, other people, and situations, yielding a sense of empowerment when exerting control, or a sense of disorientation when losing of control), and resource (use of intermediate instruments to achieve goals). These three metaphors are further refined through the lenses of the spatial-temporal continuum represented by space (social media representing an open area that is penetrated and navigated), time (evolution of existence and events in the past, present, and future), and speed (rapidity of movement). Together, the three metaphors and the spatial-temporal continuum present a multi-dimensional understanding of consumers’ representations of social media.

The union of metaphorical and spatial-temporal dimensions used in this research provides an original way of looking at how consumers experience different aspects of social media platforms. Researchers may advance studies about specific social media platforms combined with the dimensions of space, time, and speed, to enhance precision about consumers’ experiences with social media. The findings are valuable to managers of numerous domains for the purpose of enhancing online platforms according to consumers’ needs and wants, as well as for the implementation of new strategies which can improve the customers’ online experiences.
