We build upon recent spatial research to deepen the exploration of persistence resilience within modern consumption contexts of austerity. In-depth interviews with 38 consumers from six European countries revealed self-efficacy, creativity and community as key themes related to persistent resilience, activated in response to severe and sustained austerity.

EXTENDED ABSTRACT

While much has been written on austerity from political and economic perspectives (e.g. Blyth 2013), there has been limited marketing attention regarding the effects of austerity on consumers. Even less focus has been directed at long-term and proactive responses to austerity which, we argue, can be understood via the concept of persistent resilience (Golubchikov 2011). This study explores the nature of this enduring and dynamic form of resilience manifested by consumers across EU countries affected by austerity. Drawing on recent spatial studies, we contribute to academic literature by advancing our understanding of the concept of persistent resilience and by distinguishing its underlying characteristics within the consumption context of EU austerity.

There is an extensive literature on resilience and its varying definitions are represented from many areas including psychology (e.g. Lazarus 1993), sociology (e.g. Evans and Reid 2013), consumer research (e.g. Ball and Lamberton 2015); disaster studies (e.g. Baker and Baker 2014) and ecology (e.g. Adger 2000). Recent conceptualisations of resilience are premised not upon a one-off event from which individuals bounce back, but rather on their ability to continually re-emerge from on-going adversity, for which one must be continuously prepared and increasingly respond to (Neocleous 2012; Evans and Reid 2013). Thus, the growing importance of a sustained, flexible and dynamic response to the enduring challenges of modern society paves the way for a more relevant form of resilience to explore in our austerity context - persistent resilience.

Defined as “a form of engagement with more enduring, lasting challenges and pressures...that underlie everyday life”, persistent resilience allows for a proactive and continuous renegotiation of everyday life practices and relationships (Golubchikov 2011, 4). Persistent resilience was conceived within spatial studies in response to the pressures of modern society but also as a coping strategy over prolonged periods of time. More recent studies have applied persistent resilience to explore how households and communities “develop responses to more long-term processes, such as the changing nature of employment and ... altering state policies” (Andres and Round 2015, 676). The associated restructuring of common, everyday practices and relations may, in turn, form the basis for more significant transformation and even permanent change at both an individual and societal level (De Verteuil and Golubchikov 2016). Building upon this spatial research, we propose that the ongoing phenomenon of austerity in affected EU states necessitates the activation of persistent resilience and we explore its specific nature and characteristics within an austerity consumption context, deliberately including in our study countries that have experienced varying degrees of austerity.

Our cross cultural interpretive study was conducted by a team of European researchers across six countries. A purposive sample (Patton, 1990) of 38 people across a range of demographics e.g. age (ranging from 18 to 65), gender (14 male and 24 female), life-stage, profession and income, including unemployed people, were interviewed from Ireland, UK, Spain, Portugal, Italy and Greece. Face to face in-depth interviews were chosen as an appropriate form of social enquiry (Denzin and Lincoln 1994; Miles and Huberman 1994) to explore the effects of austerity over a lengthy period, in terms of changes to everyday consumption practices and experiences, both prior to and during austerity. The interviews ranged in length from 45 minutes to 2 hours and reached a deep level of richness and insight. Following transcription and, where necessary, translation, cycles of coding, cross-checking and theoretical review (Strauss and Corbin 1990; Clark and Braun 2013) were followed by all research team members. Using a thematic approach, three distinct themes of self-efficacy, creativity and community relating to persistent resilience were identified.

Persistent resilience was demonstrated through an active renegotiation and continuous adaptation to everyday life challenges as well as in a process of transformation and long-term adjustment, often leading to a renewed sense of wellbeing, sustainable values and reciprocal goals. Self-efficacy was identified by participants’ ability to persist, adapt and transform, often facilitated through a mind-set change. Manifested through upskilling, working several jobs and enterprise formation, self-efficacy was seen as part of a process of flexible adaptation to the risky austerity context. As part of this transformation, the restructuring of everyday practices was also undertaken through numerous creative means, reflected by the theme creativity, involving creative thinking, making and doing, and resourceful budgeting to demonstrate a persistent creative response to the financial challenges of austerity. Captured by the theme community, persistent resilience was further enabled through drawing on key relationships with family, friends and colleagues to share the burden of financial uncertainty and, together, increase strength and resilience. Community was also reflected through deep solidarity towards others at a localized level and also broader community and national levels. Collectively, the themes of self-efficacy, creativity and community, underpinning persistent resilience, reflect a wide range of proactive, continuous and sustained responses to the on-going challenges of austerity.

As European consumers continue to navigate long-term austerity, our study presents rich and timely insights into the nature of their persistent resilience and how this differs across culture and historical context. Reflecting the dynamic, enduring and proactive nature of this resilience, our analysis identifies a wide range of self-efficacious, creative and community-based strategies involving adapting to, persisting with and transforming consumers’ everyday practices and social relations. Persistent resilience in our austerity context involves an enduring self-belief and positivity to creatively embrace continuous change and social reciprocity at personal, local and societal levels. While the economic and social pressures of austerity may, in some instances, still bring about marginalization, exclusion and displacement, persistent resilience provides the armor to continuously and creatively transform, and, thus, mitigate its effects. Regarding addressing potential limitations of the study, the size of subgroups within the cross-cultural sample could be increased by conducting larger scale multi-country qualitative research comparing differing levels of resilience. Future research should focus on investigating...
how persistent resilience could be nurtured individually and collectively through collaboration between governments and local community bodies.
